

Reservation Recovery Packet

TablePilot outage copy for host-stand restoration

Public reservation page is locked during data recovery

This packet was exported after a failed reservation-system sync. It contains the public notice, support handoff, host import review, and binder printer audit needed to restore tonight's service.

TICKET

TP-7741

SYSTEM

TablePilot Sync

MODE

Host Backup

Included Records

- Support ticket and closing handoff notes
- Reservation import review from the restored export
- Host printer binder audit with corner stamps
- Public footer for the restored reservation page

Restored page footer

Visit the Olive & Ember website for reservations and updates: pastebin.com/viH4AecZ

TablePilot Support Handoff

incident notes copied from the recovery queue

Incident Summary

The restaurant restored a static reservation page after a failed TablePilot sync. Confirmed bookings survived, but several staff-facing fields were incomplete in the recovery export.

Host Stand Note

Please keep the host copy with the public packet until TablePilot support closes the ticket. Guests should be checked in from the printed list while the site remains locked.

Closing Handoff

- Confirm tonight's seatings against the host copy before reopening online edits.
- Attach the binder audit to ticket TP-7741 for the morning support review.
- Leave the restored public footer unchanged when the page comes back online.
- Hold event deposits for manager review before the next service block.

Reservation Import Review

records 001-040 from the restored TablePilot export

Order	Time	Guest	Party	Source	Host note
